

ASCIIVISION

V3.0 · ALL-IN-ONE TERMINAL POWERHOUSE

A single Rust binary that packs **agentic AI chat**, real-time **video & audio** as ASCII, live **webcam & screen share**, a WebRTC **browser studio**, ray-marched **3D effects**, seven **arcade games**, room-code **video chat**, a tiling window manager, and system telemetry – all inside your terminal.

FFmpeg video+audio

half-block · true pixels

WebRTC studio

AR hats

Claude · Grok · GPT · Gemini · Ollama

// GET STARTED

- `./install.sh` one-line setup: Rust, FFmpeg, yt-dlp, Ollama, PATH
- `asciivision` run from anywhere
- `Ctrl + P` **command palette** – fuzzy-run any command, effect, game, layout
- `F1` full help overlay (generated from the live registry)

Copy `.env.example` → `.env` for API keys. Everything else (video, effects, games, tiling) works with no keys.

// CORE KEYS

- `F2` cycle AI provider
- `F3` toggle video panel
- `F4` cycle the 11 effects
- `F5` toggle webcam
- `F6` cycle tiling layout
- `F7` boot / focus the Tiles PTY panel
- `F8` cycle focused tile's panel type
- `F9 / F10` randomize / reset color theme
- `Ctrl + L` clear transcript · `Esc` exit/clear · `PgUp/Dn` scroll

// TILING

HYPRLAND-STYLE

- `Ctrl + h j k l` focus tile left / down / up / right
- `Ctrl + +HJKL` swap focused tile in that direction
- `Ctrl + [ ]` shrink / grow the focused split
- `Ctrl + n` cycle tile to next panel type

Focused tile has a double border. 13 panel types, 8 layout presets.

// VIDEO & AUDIO

NOW WITH SOUND

- `/youtube <url>` stream YouTube (+ 1000 sites) into the video bus
- `/video` toggle the video panel · plays at correct speed w/ audio
- `/vmode` **cycle fidelity**: `ascii` → `half-block (2x)` → `true pixels`
- `/mute` mute / unmute the audio
- `/webcam` live camera → ASCII

True pixels (crisp video, not glyphs) auto-detect in Kitty / Ghostty / iTerm2 / WezTerm; half-block is the universal fallback.

// EFFECTS & THEME

- `/fx <name>` jump to an effect · bare `/fx` cycles
- `/3d` toggle the ray-marched effects engine
- `/theme <random|reset>` recolor everything · `/randomize` = `F9`

Ray-marched, multi-core: `torus` · `metaballs` · `tunnel` · `synthwave` · `julia` + matrix rain, plasma, starfield, wireframe, fire, particles.

// ARCADE

7 GAMES

- `/games` open the arcade bay (applies the Arcade layout)
- `/games <name>` `pong` · `tron` · `snake` · `breakout` · `pacman` · `space` · `penguin`
- `WASD / arrows` play · `R` reset · `Esc` back

Pong & Tron play online vs a `/host` · `/join` peer – pick `HOST/JOIN ONLINE` in the mode menu.

// VIDEO CHAT & STUDIO

THE CONNECTION

- `/host` open a room → prints a short **ROOM CODE**
- `/join <code>` join a friend's room – no URLs, no IP hunting
- `/screenshare` your desktop as live ASCII → streams into the call
- `/chat <msg>` message the room · `/username <name>`
- `/studio` **open the browser studio** ↓

/studio serves a web app from the terminal: real WebRTC 2-way video, screen share, face-tracked AR hats, and a `three.js` scene. Browser & terminal peers share one room.

// AI & AGENT

- `/provider <name>` `claude` · `grok` · `gpt` · `gemini` · `ollama` (`F2`)
- `/ollama` switch to local models + numbered picker
- `/trust` agent trust: `confirm-destructive` · `confirm-all` · `full-auto`
- `!<cmd>` run any shell command inline · `/curl` `/brew`
- `/remember k = v` persistent agent memory · `@file` injects a file

Streaming responses with mid-stream tool use: run shell, read/write files, search, HTTP, sysinfo.

// TILES & LAYOUT

- `/tiles [1-8]` real PTY terminals in a grid (run `codex`, `claude`, any CLI)
- `/layout <name>` `default` · `dual` · `triple` · `quad` · `webcam` · `focus` · `videochat` · `arcade`
- `/sysmon` CPU · mem · net · load, per-core sparklines
- `/analytics` conversation stats dashboard
